# Infosys HSE Management System

PUBLIC

Infosys®

POWERED BY INTELLECT
DRIVEN BY VALUES

## PREAMBLE

Infosys is committed to providing a safe and healthy work environment to all its employees including contract workmen. This Policy elaborates the core intent of the organization on Health, Safety and Environment and its intended implementation.

## OZONE -HEALTH, SAFETY AND ENVIRONMENTAL MANAGEMENT SYSTEM (HSEMS)

Our Health, Safety and Environmental Management System (HSEMS) is certified to ISO 45001:2018 standard and ISO14001:2015 standard. The scope of HSEMS is all activities, which are a part of our operations and employees working for and on behalf of the company including deputees at client sites. Safety and well-being of our employees is accorded the highest priority. The certifications can be found in the following link. The robust HSEMS at Infosys has enabled us to achieve certification to ISO 45001:2018 and ISO14001 standards across all India locations, including Infosys Limited and its subsidiaries, in line with our HSE strategy. The management system is implemented across locations globally based on applicable legal requirements and internal benchmarks and are a part of our internal audit coverage.

https://www.infosys.com/about/esg/certifications.html

## HSE POLICY

The Health, Safety and Environmental (HSE) Policy is a statement by the Top Management, enunciating the philosophy and commitment of the Company towards Environmental protection and Management of Health & Safety of employees, contract workmen and visitors and the larger community as relevant. The policy statement is available in the link below

https://www.infosys.com/sustainability/resources/documents/health-safety-environmental-policy.pdf

## GOVERNANCE

Infosys has established a Health, Safety and Environmental Management System (HSEMS) under the aegis of the HSE policy and is certified to ISO14001 and ISO45001 in line with the Strategy. The HSEMS at Infosys is headed by the EVP & Global Head finance & Chief Risk Officer. Our Board instituted an Environmental, Social and Governance Committee to discharge its oversight responsibility on matters related to organization wide ESG initiatives, priorities, and leading ESG practices which are demonstrated through our HSEMS. ESG goals are being cascaded to our business leaders and chalking out a roadmap to achieve the same. The ESG Committee of the Board is apprised of the progress on the goals on a quarterly basis.

## POLICY OVERVIEW

I. **Sustainable Resource Usage:**

PUBLIC

Aligned to its core values and in line with the Sustainability policy, Infosys intends to work towards conservation of natural resources with guidance from the top management and ensure sustenance.

The focus areas for conservation include and is not limited to:

**a. Energy:**

- Reduction in per capita consumption of electricity through optimization and implementation of emerging technologies in operations
- Construct energy efficient buildings (green buildings)
- Implement smart building solutions
- Harness energy from on-site and off-site renewable sources
    - Sourcing Green power
    - Investing in Solar power

**b. Water:**

- Reduction in per capita fresh water consumption
    - Increased use of recycled water in operations
    - Optimization
    - Implementation of emerging technologies in operations
    - Procurement and use of grey water
- Water sequestration
    - Rain water harvesting
    - Creating lakes, injection wells for recharging acquifers
- Undertaking Lake rejuvenation projects in the water shed area

**c. Paper:**

- Reduction in paper consumption
    - Digitization
    - Employee Awareness
    - Smart procurement

**d. Fuel:**

- Use of efficient equipment
- Optimization

## II. Prevention of pollution

Pollution prevention at Infosys covers the following:

**a. Waste:**

- Reduction at source

PUBLIC

- Segregation
- Reuse / Recycle
- Scientific disposal in adherence to applicable legislations
- Zero waste to landfill
- Certifications on Zero waste to landfill

**b. Emissions:**

- **GHG emissions:**
  - Aggressive targets and programmes for reduction in GHG emission

- **Air (Stack) emissions:**
  - Monitoring and compliance to stipulated legal norms
  - Efficient equipment
  - Phase wise retrofit of DG sets based on latest legislations

- **ODS**
  - Retrofit of R22 refrigerants with zero ODP refrigerants

- **Sewage:**
  - Stringent water recycling and replenishing systems
  - Reuse of recycled water

- **Noise:**
  - Acoustic enclosures for noise reduction
  - Advanced equipment

**III. Compliance Obligations**

- Applicable Legal requirements
- Other requirements – Infosys internal requirements like standards / Regulatory Guidelines (NBC), customer requirements, Benchmarking requirements etc.,

**IV. Awareness and Training**

PUBLIC

Our journey towards continual improvement and embedding HSE culture in the organization involves employee awareness, engagement, and participation. Employees are sensitized on aspects of HSE through induction programmes, mailers, portals, Infy TV, sessions by experts etc.,

Embedding a safety-first culture and to imbibe quality of environmental protection in the organization necessitates competency development. Training needs are identified based on the nature of jobs. Personnel whose work may create a significant impact on the environment or whose work may pose occupational health and safety risk will be given an appropriate orientation to make them aware of:

- The significant environmental, occupational health and safety impacts and consequences, actual or potential, of their work activities and the benefits of improved personal performance.
- Their roles and responsibilities in achieving conformance with the HSE policy and procedures, and with the requirements of the HSEMS, including emergency preparedness and response requirements.
- The potential consequences of deviations from specified operating procedures.
- Specialized safety training sessions dealing with an employee's unique job assignment must be developed by each supervisor. It is the responsibility of each supervisor to understand his/her employee's job tasks and related hazards.
- Training is also provided to employees concerning general safe work practices (Safety Training Program) as well as specific instruction with respect to hazards unique to each employee's job assignment.
- Trainings also include awareness on aspects of resource conservation (water, power), waste management (including reduction, alternatives), emissions amongst others
- Series of communication is ensured to all employees to drive the concepts of HSE policy, the hazards or environmental impacts and actions Infosys has taken to address these concerns.

Training includes awareness-building, mock drills, classroom sessions and periodic demonstrations. It is also a part of our employee induction programs. E-learning module is available globally as a continuous learning platform for employees. Job-specific training is regularly conducted for contractual staff during induction and later through refresher courses

## INTERESTED PARTIES

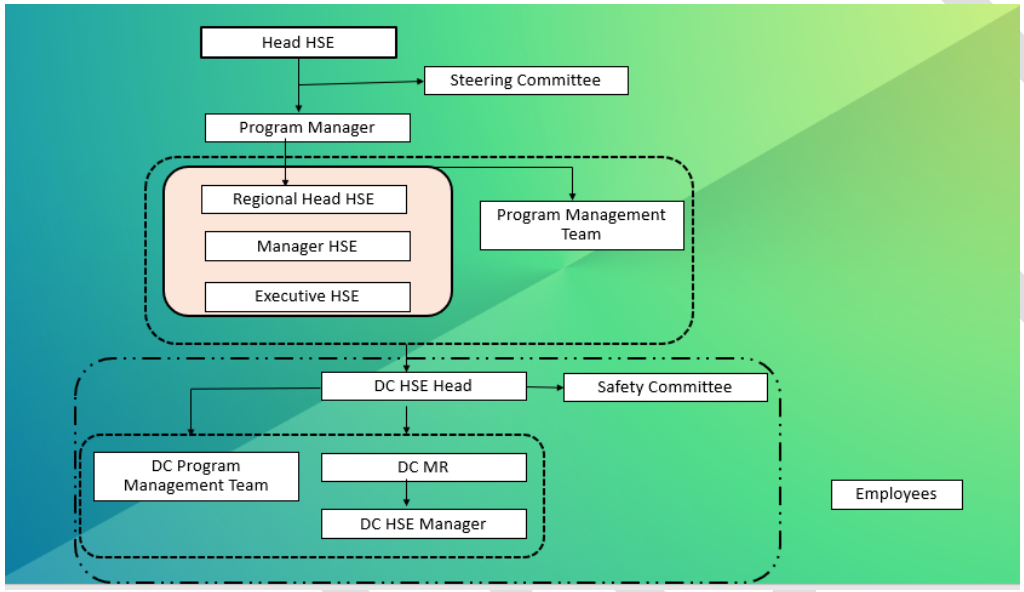

Individuals or groups who can affect, be affected by or perceive themselves to be affected by a decision or activity of an organization are known as interested parties or stakeholders. Interested parties for Infosys, their needs and/or expectations relevant to its environmental, OHS and energy performance are identified and documented. Stakeholders are consulted and their suggestions and concerns are evaluated and considered for any changes in policy or procedures related to HSE.

## ELEMENTS OF HSEMS

**I. HSE Organization**

PUBLIC

At the Corporate level the HSEMS is headed by the CHIEF RISK OFFICER AND EVP - FINANCE OF the company. A core team of senior representative of business and enabler functions led by Program Manager support the Head HSE to manage the initiative and provide strategic and thought leadership. A team of cross functional managers are responsible for day-to-day management of the initiative. At the location level a cross functional team headed by the Development Centre (DC) Head is responsible for this activity. Detailed roles, responsibilities and authorities are established and published internally.

## I. Risk Management

The HSEMS is based on the Demings cycle and has a focused risk-based approach in identification and implementation of operational controls in line with hierarchy and effective mitigation of hazards / aspects. Risk assessment is proactively conducted to identify hazards for all existing / new / modified activities, processes, products or services and the implementation of measures to minimize or control impacts and monitor them in a structured manner. Risk assessment is proactively conducted on a yearly basis or at the beginning of a new process or activity. Reactive risk assessments are also carried out at least once every quarter. Hazardous conditions present are identified and prioritized for elimination and control. Once the identified hierarchy of controls are implemented, the document is revisited to assess the residual risks. A ranking is done based on the severity and probability of the risk. The Occupational Health

and Safety (OH&S) hazards in the workplace are communicated to all concerned stakeholders who are also consulted when there are changes in operations. Relevant OH&S hazards are identified, and appropriate operational controls are implemented. During training, the hazards are shared along with directions on ways to reduce the risk. Employees are also consulted during development and review of policies and procedures to manage risks. As Infosys is an IT/ITES company, there are no product risks but those related to the provision of services like ergonomics in work, emotional wellbeing, risks associated with operation of utilities, commute, resource depletion, emissions, Waste management etc. Participation and consultation with relevant personnel involved in the activities is ensured during the process of risk assessments. HSE subject matter experts across our locations enable day-to-day management of the requirements. Risks are also assessed prior to and post the development of new buildings. Experience from previous projects and current operations are also considered.

**II. Objectives, Targets and Management Programs**

Documented HSE objectives and targets are established and maintained, at each relevant function and level within the campus. When establishing and reviewing environmental, occupational health and safety objectives and targets, the following are considered:

- Significant environmental aspects and their impacts
- Significant OHS hazards and risks.
- Legal & other requirements
- Commitment to the HSE policy
- Use of best available technology, which is economically viable, cost effective and deemed to be appropriate
- Financial, operational, and business requirements
- Views of interested parties such as the Central/State Pollution Control Boards, Regulatory Agencies, investors, customers, neighboring industries, employees, statutory bodies, and neighboring settlements.

The HSE objectives established are measurable and achievable (SMART). A detailed action plan for achieving the HSE objectives and target is decided and documented. The responsibilities and time frames for the action plans are recorded in the Programmes. Each action plan may be subdivided to address specific elements of the action plan (e.g., planning and execution) and recorded in the Programmes for specific measures such as provision of infrastructure/

Long Term Targets

1. Carbon Emissions
    a. To maintain Carbon Neutrality across scopes 1, 2 and 3 emissions for each year up to FY2030
    b. Target: To reduce our scope 1 and 2 GHG emissions against business-as-usual scenario by utilizing RE, corresponding 78% RE utilization in India.
    c. Target: To reduce our absolute scope 3 emissions by 15% against base year of FY2020.
    d. Target: Replacement of air conditioning units / water coolers containing R22 refrigerants in a phased manner by March 31, 2030.

2. Zero Waste to Landfill by 2030

3. Zero waste certification 100% of owned campuses by 2030

PUBLIC

a. Target: Certification for 7 identified owned campuses across India by 31st March 2026

b. Target: Certification for 5 identified owned campuses across India by 31st March 2027

c. Target: Certification for 5 identified owned campuses across India by 31st March 2028

d. Target: Evaluate and obtain True Zero waste certification for owned campuses overseas based on feasibility by 31st March 2030

4. Waste Water Management
   a. Target: Ensure 100% of our wastewater is treated by FY2030

5. Phase wise enablement of roof rainwater harvesting mechanisms across identified owned campuses in India by FY 2030.

   - FY26: Rooftop rainwater harvesting projects to be implemented in buildings across identified campuses – Pune Phase 1, Chennai Sholinganallur, Mysore, Hyderabad SEZ, Chandigarh, Trivandrum, Mangalore, Bhubaneshwar STPI
   - FY27 to FY 30: Rooftop rainwater harvesting projects for other identified locations

6. Installation of Dual Plumbing system for reuse of treated water there by reducing freshwater sourcing at old campuses where dual plumbing is not available
   - FY26 : Dual plumbing and recycled water connectivity is planned for HYD STPI, BBSR STPI, Mangalore, Chennai Shols & Ecity campus
   - FY27 to 2030: Dual plumbing and recycled water connectivity for other identified locations

7. Water Neutral / Water positive certifications for 100 % of owned campuses (24 owned campuses) in India by FY 2028

   - FY26: Achieve water neutrality and positive certification for 9 owned campuses (Trivandrum, Chennai Mcity, Shols, Mysore, Hyd SEZ, Hyd STPI, BBSR SEZ, BBSR STPI, Chandigarh)
   - FY 27: Achieve water neutrality and positive certification for 8 owned campuses
   - FY 28: Achieve water neutrality and positive certification for 7 owned campuses

PUBLIC

## SHORT TERM TARGETS

### ENVIRONMENTAL

8. Reduction in electricity consumption
   a. Target: 5% per capita (Based on consumption of FY 2025) by March 31st, 2026

9. Reduction in freshwater consumption
   a. Target: 5% per capita (Based on consumption of FY 2025 – excluding ECC and Green Belt) by March 31st, 2026
   b. Target: Evaluate and enable procurement of secondary quality water (Grey water) through authorized agencies/authorities to meet out the water demand for landscaping applications which helps to reduce requirement of freshwater procurement substantially by March 31, 2026
   c. Target: Implementation of dual plumbing for buildings in identified campuses to utilize the STP treated water for flushing by March 31, 2026
   d. Target: Implement smart irrigation projects to optimize water consumption in landscaping applications in identified DCs by March 31, 2026

10. Reduce freshwater consumption in ECC (at locations where available)
    a. Target: Maintain per capita consumption at NBC level of 135 ltrs per day
    b. Target: Explore feasibility and installation of dual plumbing in identified locations to reduce freshwater consumption by March 31, 2026

11. Enhanced monitoring of Wastewater in STP's
    a. Target: Installation of Online Continuous Effluent Monitoring System (OCEMS) in the STP in identified locations by March 31, 2026
    b. Integration of OCEMS with Building Management System (BMS) for online monitoring in identified locations by March 31, 2026

12. Water Management
    a. Target: Upgradation of STP plants to MBR technology in identified DCs (BBSR-STPI, Mangalore SEZ and Jaipur SEZ) by December 31, 2025, to achieve upgradation in 100% of owned campuses in India to enhance quality of treated water for secondary use and thereby reducing freshwater sourcing.
    b. Target: Retrofit of end-of-life STP's in Pune Phase 2 by March 31, 2026

PUBLIC

c. Target: Revisit irrigation water requirements and identify areas for implementation of smart irrigation projects in identified locations by March 31st, 2026.

13. Implementation and certification to ISO50001: Energy Management System
    a. Target: Coverage of identified owned campuses (5 locations) by March 31, 2026

## HEALTH AND SAFETY

14. Enhancing engagements / interventions on well-being related topics
    a. Target: Emotional wellbeing sessions by September 30, 2025
    b. Launching the "Train the Trainer" training on Mental Health First Aiders by December 30, 2025
    c. Focused interventions on strengthening the social connectedness within the organization by March 31, 2026
    d. Target: Physical wellbeing Interventions as Identified by December 31, 2025

15. Enhanced safety and compliance adherence in identified processes.
    a. Target: Enhance confined space program (Hazardous & Non-Hazardous) across India locations, through implementation of identified controls by 31st December 2025.
    b. Target: Revisit of identification of risks / unsafe conditions for activities involving work at height and implement controls to mitigate the same across all locations by March 31, 2026.

### III. Emergency Preparedness

The company faces the threat of disaster from internal and external sources. They could be natural or man-made, technological, or political disasters. Disasters could be accidental or intentional. Such disasters could be controllable or those beyond the organization's control. Disasters could strike with prior warnings or could come with no prior warnings. We have established contingency systems to minimize damages due to emergencies. Mitigation addresses the positioning of those measures and activities that will lessen the possibility or the impact of an adverse incident occurring in the organization.

Emergency Response procedure (ERP) is established considering various scenarios. The ERP covers aspects like pre-event controls, actions to be taken during the emergency and post event activities. There is a clear definition of roles and responsibilities, and mock drills are conducted at defined frequencies to test our preparedness and identify and address any gaps as per the defined ERP.

PUBLIC

Emergencies are identified under HSE and BCMS. The emergency response procedure considering various scenarios is documented with defined roles and responsibilities of personnel. Emergency preparedness and response will also be reviewed and revised, when necessary, after the occurrence of the emergency.

### IV. Incident Management

A process for Incident management exists including Incident reporting, investigation and implementation of appropriate correction and corrective measures. Employees, contractual staff, visitors are all expected to report incidents including near miss and potential hazards in addition to accidents. Mechanisms have been implemented to report incidents.

The investigations would focus on root causes and system failures and measures are identified and implemented to prevent recurrence or occurrence of such incidents which will enable reduce future injuries and losses. Detailed investigations should be carried out for all incidents. Less serious incidents (near misses or incidents where there is no lost time) should be investigated with a degree of rigor appropriate to the potential for loss or injury.

### V. OH&S Committees

Occupational Health and Safety (OH&S) Committees OH&S Committees comprising cross-functional teams are established at each of our campuses and offices. The Development Center Heads chair the safety committee meetings at their respective locations in India. In our overseas offices, these committees are formed based on local legislation. The employee representation in safety committees is 100%. The committee brings employees and management together in a non-adversarial, cooperative effort to promote OH&S within the entire workplace. The committee ensures the establishment, implementation, maintenance, and continual improvement of processes needed for the elimination of hazards and minimization of risks. Contract workers are also an intrinsic part of the committee, which is one of the ways to ensure participation and consultation. The OH&S committees are responsible for conducting investigation of reported incidents, assisting in the development and implementation of the OH&S best practices to minimize risks, and providing an opportunity to raise concerns and recommend solutions for various OH&S-related issues.

### VI. Inspections

A health and safety inspection program is established to ensure a reduction in unsafe campus conditions, which may expose employees and the public to incidents that could result in injury to individuals or property damage.

#### SCHEDULED WORKPLACE INSPECTIONS

- Regular and systematic workplace inspections are scheduled for all areas. Area specific supervisors are assigned to conduct these inspections.
- The frequency of regular workplace inspections is once every quarter.

PUBLIC

## UNSCHEDULED WORKPLACE INSPECTIONS

- Departments will conduct an immediate inspection whenever new substances, processes, procedures, or equipment, which represent a new potential health and safety hazard, are introduced.
- Departments also will conduct an inspection whenever notification of a new or previously unrecognized hazard is received.
- Unscheduled inspections of any workplaces to help ensure the maintenance of a safe and healthful workplace. Non-compliance will result in notices of deficiencies being issued.

Records of scheduled and unscheduled inspections are maintained which enable identification of unsafe conditions and work practices. The closure of identified gaps is ensured and tracked.

## VII. Participation and consultation

The engagement of employees in ensuring safe and healthy workplace is essential and this is enabled through the process of participation and consultation which includes employee / contract staff involvement in:

- Development and review of policies and procedures for risk management.
- Change management where this might affect workplace health and safety through management of change procedure.
- Representation in health and safety matters through the Safety Committee.
- Understanding the OH&S hazards in the workplace which are communicated to all concerned including contractors and visitors.
- Health promotion programs including a Safety Week and Health Week are conducted annually.
- Incident reporting includes potential hazards and participation in the process of identification and implementation of controls based on root cause analysis, avoiding the recurrence of incidents, and aiding in elimination of unsafe behavior and conditions.
- Emergency mock drills and reporting or identifying learnings which need to be addressed.

PUBLIC

## VIII. Health & Safety

At Infosys, we are committed to providing and maintaining a healthy, safe workplace by:

- Eliminating hazards and reducing risks
- Providing and maintaining safety equipment
- Appropriate, timely, and regular safety training

Well-equipped Occupational health centers are established at our campuses in India with physiotherapy facilities as well. All relevant norms are ensured including competent Medical Staff being provided by the hospitals who are associated for operations of the OHC and physio centers. Health risk assessments are conducted, which enable identification of areas for specialist consultations/interventions. We work on tackling the rising concerns of employee stress, health and overall wellness through workshops, awareness communication, health checks, online chat sessions and focused communication campaigns. In compliance to GDPR and other data protection laws, the specific health information of employees are available only with doctors. Only trends are made available to HSE teams for analysis. Through this, we also ensure the information is not used for any favorable or unfavorable treatment of workers.

There are also benefits provided to employees with options of health checks, interventions through our extended tie up with hospitals to benefit employees and dependents for addressal of non-occupational related illness too. Insurance coverage is ensured for employees and contractual staff. Specific programs for contractual staff like mandatory health checks are conducted, along with interventions based on analysis of the risks or hazards. During reviews the progress of management programs for reducing/preventing health issues/risks is comprehensively addressed.

Safety at the workplace is accorded one of the highest priorities at Infosys. We have always focused on building a culture of safety, emphasizing individual responsibility. Systems have been established, including work permits, trainings, LOTO (lockout/tagout), safety inspections, audits, operational controls, monitoring, audits and assessments and others. Gaps, learnings, deviations, findings if any are identified, controls implemented and tracked for effective closure. Processes, guidelines, and work instructions are established at various levels addressing various aspects of safety involved in routine / non-routine activities of our operations. Policies have been established focusing on specific areas like women's safety, lone-working, transport, travel, construction, among others. Inspections, audits, observations from mock drills, risk assessments etc., enable identification of gaps, learnings, deviations, which depict hazards and risks and address the same effectively appropriate operational controls are implemented.

Comprehensive interventions under the following major themes are planned and ensured:

- Physical wellness

PUBLIC

- Emotional wellness
- Safety
- Leisure

**IX. Environment**

Climate change and its ramifications like rising global temperatures, deteriorating air quality and contamination of our waterbodies are among the largest crises looming over the planet in recent times. At Infosys, we recognized the gravity of this issue early on and began focusing on climate action since 2008, through energy efficiency, renewable energy, and carbon offset programs. Our aim to adopt, invent and spread smarter ways to mitigate GHG emission, reduce energy consumption and manage water and waste. To make our planet stronger by consistently embracing clean tech in our operations and client solutions, thereby minimizing the impact on nature. We achieved Carbon Neutrality in fiscal 2020, 30 years ahead of the 2050 timeline set by the Paris Agreement, as a culmination of our decade long efforts in environment stewardship and have been consistently achieving the same for the past 4 years. Over the past decade, we have leveraged technology to build and run some of the most efficient buildings and campuses globally. Campuses that conserve energy, save water and treat waste responsibly. Our campuses are 'living labs' for clean technology. Leveraging our expertise, we set up the Sustainability Practice Unit in 2020 with a mission to serve the preservation of our planet by shaping and sharing technology solutions. The practice works collaboratively with business units to scale technology-led solutions to tackle climate change. Our sustainability philosophy is about ensuring that our business, our clients' businesses, and our ecosystems are all sustainable. Now, we are bringing our net carbon neutral success to sustainable offerings for our clients' businesses, throughout the market. We have proven that we understand the metrics of sustainability and global reporting criteria.

We have over the years implemented energy efficiency projects across HVAC and lighting spaces through various initiatives that include:

- Retrofits in HVAC – Chiller efficiency improvements
- Augmentation of water heating with solar water heaters
- Lighting
- Transition of remote desktops to VDI interface to automatically shut down desktops which are on
- Replacement of conventional UPS with Modular UPS
- UPS Retrofits leading to over 10% efficiency improvement
- High efficiency data centers

Infosys by virtue of its long-term commitments on Sustainability including aspects of Climate Change, Sustainable Resource Usage, Prevention of pollution and others in addition to ensuring adherence to applicable legal requirements has made great strides in this area and is a leader in this space. HSE performance is tracked, monitored, reviewed in detail. The areas for Environmental Monitoring include:

- Evaluation of Compliance to ensure adherence
- Evaluation of progress of environmental goals

PUBLIC

- Testing of various parameters through MOEF approved / NABL certified labs to ascertain adherence to applicable norms and ensure parameters are within legal norms.
    - Raw Water, Drinking Water, Sewage Treatment Plant (STP) treated water, Sludge
    - Stack emissions, Ambient Air, Ambient noise, Insertion loss (DG sets)
    - Used oil (Hazardous Waste) before disposal
    - Calibration of instruments / solutions against certified instruments/solutions having a known valid relationship to National / International Standards.

## X. HSE Requirements for Supply Chain

Contracts with suppliers contain clauses to ensure adherence to Health, Safety and Environmental requirements. These are also comprehensively addressed through the Supplier Code of Conduct as well including that of adherence to legal requirements.

PUBLIC
